Overview of Special Issue:

The COVID-19 pandemic has altered the world of work and how work is done in construction is no exception. How will construction practice or process change? How do these changes affect productivity, efficiency, people, service, production and product in construction? How will the international construction management as a whole be impacted, and how will construction management research be affected in the short and long term? These questions are pertinent and it is already a significant discussion point within the community of practice.

Indicative list of anticipated themes:

- Safe and healthy work in COVID-19 era
- Prevention through design in COVID-19 era
- Ethical challenges and reasoning in COVID-19 era
- Workers conditions in COVID-19 era
