

Welcome the 12th Nordic Conference on Construction Economics and Organisation in Trondheim, 29.-31. May 2024.

We are pleased to announce that we have opened for abstract submissions to the 12th Nordic Conference on Construction Economics and Organisation. Submit your abstract here:

<https://ntnu.eventsair.com/creon-2024/submissionportal>

Abstract deadline:	December 1 st 2023
Feedback abstract:	December 15 th 2023
Paper deadline:	February 1 st 2024
Paper length:	Maximum 12 pages

Maximum abstract length is 300 words.

When deciding the detailed program, we will strive for the same balance between academic conversations and informal dialogue as the organizers of the 11th conference in Copenhagen/Malmö in 2022 did. The presentations of the papers with following discussions will be engaging and fun. The conference becomes what we make it – together!

Performance under complex conditions

Construction economics and organization are challenged to bring sustainability and increased value creation into projects. This will require performance on a higher level in a time when the situation in society seems to offer more challenges, complexity, and uncertainty than ever. It challenges the decision makers on projects, professional planners and designers, contractors, and suppliers – and even the researchers.

We welcome papers on construction economics and organization. Examples of themes and cases we will involve with during the conference:

- World Ski Championship in Trondheim 2025. This example illustrates performance on all levels; individual, team, project – and even on a societal level through engaging people in a fabulous event.
- The idea of sustainability as based on the three pillar thinking – environmental, societal and economic – is under pressure by increased awareness of complexity brought by societal risks, increased demands for resource effectiveness, and disruptive new technological breakthroughs. All of these need consideration for sustainable project development.
- Campus development – the conference will be held in the midst of a huge upgrade program for developing NTNU campus in Trondheim, a program that has met all the challenges we could think of and a few more. In a wide sense, the term ‘campus’ does not need to indicate university or even educational functions. Even single building projects are embedded in a neighbourhood, transport system, energy system etc. Even more so is the urban city development.
- Infrastructure projects become more and more complex – not necessarily due to the increasing size in monetary terms, but through changes in mobility, integration of technical systems, technological advances such as the use of AI and monitoring, organizational involvement of more stakeholders, and with moving goals that are constantly renegotiated.

Template & requirements

Paper templates and more specific requirements that authors have to comply with to be accepted for the IOP proceeding can be downloaded from this link: [Download paper template and view requirements here](#)

Thus we thank you for downloading the above templates, as it is of utmost importance that your paper follows each and every requirement in the template in order for us to enable this.

You can find simplified instruction for how to do this here:

 [Download simplified instructions](#)

It is important to follow the IOP template to the point (IOP might refuse publishing if authors they do not follow template accurately). All successful papers will be published in a volume in the [IOP Conference Series EES](#)

Paper formatting

- The **maximum permissible pages are 12** in the final format of IOP Science.
- File to be uploaded: **word file** of **max 20 MB**
- File name: **please use a short file name , no author names shall be included in the file name** (refers to the first submission)
